

1)What index value does the third element of an array have?

Arrays work where, (element 1, index = 0) (element 2, index = 1) (element 3, index = 2)

2)Write the declaration for an array named quantities that stores 20 integers.

```
int[] quantities = new int[20];
```

3)Write a declaration for an array named heights storing the numbers 1.65, 2.15, and 4.95.

```
Double[] height = {1.65, 2.15, 4.95};
```

4)Write a for-each statement that displays the integer values stored in an array named grades.

```
for (int grade : grades) {
```

```
System.out.println(grade);
```

```
}
```

6)How does passing an entire array to a method differ from passing a single element of the array?

Entire = changes the whole array

single=only changes that, not original

7)

Array index start at 0

8)

1

10)

Dynamic is better, when the data size is unknown

11)

Finds it using equals(), not by comparing

12)

Use equals() to compare class values

Don't use ==
